90	R	10.9										102	D	30.3
10	R	10.4										29	D	32.1
88	R	10.3												
52	R	10.1												

Following the 2010 Elections, the breakdowns of party control of the above categories:

R = 33 / D = 0

R = 25 / D = 0 / U = 1

R = 8 / D = 12

R = 1 / D = 9

R = 0 / D = 31

Shaded = opposing party's seat going into election. Bold/Italic: seat changes party control as a result of 2010 election.

PVI: modeled on the Cook Political Report's Composite Partisan Voting Index, which uses the 2004 & 2008 presidential voting percentages in each district against the state-wide presidential vote, then averages the differences to indicate the Republican & Democratic leaning at the district level.
